DETAILED ACTION

- 1. This office action is in response to application 10/650,296 and amendment filed on 4/11/2005. Claims 1-18 remain pending in the application.
- 2. The declaration filed on 4/11/2005 under 37 CFR 1.131 is sufficient to overcome the Lu's reference (US 2005/0010884 A1).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 1-2, 5-9, 10-11 and 14-18 are rejected under 35 U.S.C. 102(a/e) as being anticipated by Lu et al. (6,550,045).
- 5. As to claims 1 and 10, Lu et al. teach a method of cell placement and clock tree synthesis (see summary, Fig. 1, 3-7 and its description) comprising the steps of identifying critical paths in an IC design (data logic path having timing information affecting clock network timing, timing violations) (at least see summary; col. 4); partitioning the IC design into a timing group (Group of clock domains) (at see summary; col. 3-4, Fig. 1, 6); assigning each flip-flop to a critical path (Fig. 1, 6);

Application/Control Number: 10/650,296 Page 3

Art Unit: 2825

performing a cell placement a minimizing a function of propagation delay and maximum distance between flip-flops within each timing group and constructing a clock sub-net for each timing group (Fig. 1, 6 and its description; col. 6). Lu et al. teach that maximal path delay between flip-flops represent both clock path and delay path between the flip-flops (see col. 4 and 6). This clearly suggests that maximal path delay must be minimized in order to minimize clock skews.

6. As to claims 2, 5-9, 11 and 14-18, Lu et al. teach substantially similar claimed limitations of each timing group contains only flip-flops (Figs. 1 and 6); assigning the flip-flops in a critical path to a timing group (Figs. 1 and 6); coupling buffer is equidistant from each flip-flop in the timing group and coupling a clock signal to the clock buffer from a clock tree to balance clock tree (insertion buffer must be equidistant from each flip-flop in the timing group in order to balance clock tree, synchronize all clock domains and to meet timing constraints; see at least Figs. 1 and 6).

Allowable Subject Matter

7. Claims 3-4 and 12-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art does not teach or fairly suggest replacing a flip-flop in a critical path with a flip-flop in a non-critical path connected to the critical path.

Application/Control Number: 10/650,296

Art Unit: 2825

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Vuthe Siek whose telephone number is (571) 272-1906. The examiner can normally be reached on Increase Flextime.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew Smith can be reached on (571) 272-1907. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
